My question is: how to change the content type to html. A: So, if you mean that the current content of your web page is not HTML, but "plain" text you could simply use this PHP snippet to output the plain text in the form you want Q: Redirect all queries to a new IP I am currently running 2 websites. I want them both to be on the same IP. So I wrote the following in the.htaccess of the new website. RewriteEngine on RewriteCond %{HTTP\_HOST} ^first.website.org\$ [NC] RewriteCond %{QUERY\_STRING} ^\$ RewriteCond %{REQUEST\_URI} !\.(jpg|jpeg|gif|png|ico|css|js|mp3|wav|mp4|swf|zip|gz|rar|bz2|doc|txt|docx|odt|odp|pps|pot|rar|7z|mid|ttf|eot)\$ [NC] RewriteRule (.\*) [L,R=301,QSA] But it doesn't seem to work. I am using XAMPP. When I enter the first website domain on the second website it goes to the first domain. So it seems to be redirecting but it is actually running the other site. A: You can try this : RewriteEngine On RewriteCond %{REQUEST\_FILENAME}!-f RewriteCond %{REQUEST\_FILENAME}!-d RewriteRule ^ [L,R=301,QSA] Working example : Q: ASP.NET MVC 5 Installation hangs for 3 hours I'm trying to install ASP.NET MVC 5 on my Windows 10 computer, but the installation hangs for 3 hours. This is the installer log: The following error was encountered while extracting the MSI: System Error: MZ: Expected PE00. The following error was encountered while installing the Microsoft ASP.NET MVC 5 setup:
